# Avery Foote

*Senior Software Engineer*

averylfoote@gmail.com (520) 302-5030 Newark, New Jersey linkedin.com/in/averyfoote

## SUMMARY

I started out as a full-stack developer, and over the years I kept getting pulled toward the harder problems: the apps that had to scale, the systems that had to stay up, and the integrations nobody else wanted to touch. Today I'm a senior full-stack and AI software engineer, and most of what I build starts with a business that has outgrown its tools.

Sometimes that means a SaaS platform built from scratch in React, Next.js, Node.js, and TypeScript. Sometimes it's a mobile app in Flutter or React Native, or an older .NET system that needs to be modernized without breaking what customers rely on. I also write Python and C#, and I deploy on Azure and AWS, so I'm comfortable wherever a project already lives.

I like owning a project from the first architecture sketch to the live product. That includes the API, the database, the CI/CD pipeline, the cloud deployment, and the tuning that comes after real users arrive. More and more of my work now includes AI agents, workflow automation, and data pipelines, and I treat them like any other part of the system: they have to be reliable, easy to maintain, and useful to the people who depend on them.

The projects I enjoy most are the challenging ones, whether that's a new product that needs a solid foundation or an existing system that needs to scale. If that sounds like what you're building, I'd love to hear about it.

## PROFESSIONAL EXPERIENCE

**NJ Technology,** *Software Engineer | Enterprise Application Development* 07/2013 – 12/2014 | Marlton, NJ

I worked primarily with C#, the .NET Framework, ASP.NET , SQL Server, JavaScript, HTML, and CSS to develop business applications and web-based solutions.

I gained practical experience in object-oriented programming, database design, backend functionality, API integration, debugging, and software testing. Working alongside experienced developers also taught me the importance of clean code, collaboration, and structured development practices.

This early experience established the technical foundation that later allowed me to grow into full-stack engineering, mobile development, software architecture, and technical leadership.

**KRS IT Consulting,** *Senior Full-Stack & Mobile Application Engineer* 01/2015 – 10/2018 | Parsippany, NJ

At this stage of my career, I built a solid foundation in designing and delivering complete software products. I moved past individual features and learned how a whole application works as a set of connected systems.

I worked on web applications, business platforms, backend services, and mobile apps. My development work included React, JavaScript, TypeScript, Node.js, C#, .NET, Python, SQL, and REST API integrations.

I also grew my mobile experience, working with cross-platform tools like Flutter and React Native, along with native iOS and Android development concepts.

I took on a bigger role in technical decisions, performance improvements, database architecture, and mentoring other developers. That experience prepared me for broader engineering ownership and leadership.

**eMazzanti Technologies** 11/2018 – 05/2023 | Hoboken, NJ

*Principal Software Architect & Engineering Manager*

As my responsibilities grew, I took on bigger engineering problems, including system architecture, technical planning, and team coordination. My focus was building reliable enterprise applications that could keep up with a growing business and increasingly complex requirements.

I worked across frontend, backend, database, and cloud technologies, designing scalable architectures with C#, .NET Core, ASP.NET Core, React, Node.js, Python, and PostgreSQL. I also contributed to mobile architecture and cross-platform development with Flutter and React Native.

Beyond hands-on engineering, I helped set development standards, improve code quality, tune system performance, and guide technical teams through tough implementation challenges.

That experience sharpened my ability to tie software architecture to real business goals while keeping maintainability, scalability, and long-term product development in view.

**PCS** 06/2023 – 2026 | Moorestown, NJ

*Director of Software Engineering | AI, Cloud & Digital Product Architecture*

My role has grown from building software solutions to leading the engineering strategy behind complex digital products. I work closely with product stakeholders and engineering teams to turn business requirements into scalable, secure, high-performing software platforms.

I lead the architecture and development of enterprise applications, SaaS ecosystems, AI-powered platforms, and mobile apps. My technical focus includes React, Next.js, Node.js, Python, C#, .NET, Flutter, and React Native, along with cloud infrastructure and modern DevOps practices.

On the leadership side, I guide architectural decisions, set engineering standards, mentor developers, and oversee delivery of critical technical initiatives. I also drive the integration of generative AI, LLMs, RAG pipelines, AI agents, and intelligent automation into business applications.

My goal is to build engineering teams where technical excellence, innovation, and business results go hand in hand.

## EDUCATION

**Princeton University,** *Bachelor of Computer Science* 09/2009 – 05/2013 | Princeton, NJ

## SKILLS

**Full Stack Development** (React, Next.js, Node.js, React native, Flutter, Dart, Laravel, Angular, C#, .NET, ASP.NET Core, JavaScript, TypeScript, HTML5, CSS3, REST API Development, Frontend Development, Backend Development, SaaS Development, Web Application Development, Mobile Application Development, Responsive Design, Microservices, Software Architecture, API Integration, Application Security.) | **AI & Software Development** (Python, OpenAI API, AI Agents, Machine Learning, LangChain, Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Prompt Engineering, Generative AI, AI Chatbots, Natural Language Processing, AI Automation, Intelligent Workflows, AI Application Development, Model Integration, Data Processing, Algorithm Design, Object-Oriented Programming, Software Development Life Cycle (SDLC), Agile Development.) | **Database & Cloud Engineering** (SQL Server, PostgreSQL, MySQL, MongoDB, Microsoft Azure, AWS, Docker, Kubernetes, Git, GitHub, CI/CD, Cloud Computing, Database Design, Database Administration, Data Modeling, Query Optimization, Database Migration, Cloud Architecture, Application Deployment, DevOps.)
